

JAIME HERNANDEZ

Engineering Student

About me

Robotics Engineering student with hands-on experience in software development and AI models. Strong foundation in object-oriented programming, algorithms, and problem-solving. Skilled in building applications with Python and JavaScript, and passionate about web development with interest in creating scalable and user-friendly applications.

Languages

Spanish- Native
English - Intermediate (B2)

Education

B.Sc. Robotics Engineering —
Universidad de Guadalajara,
Mexico Aug 2020 – Present
Expected graduation: aug 2026

Skills

- **Languages:** Python, JavaScript, SQL, C
- **Web Development:** React, React Native, Django, TailwindCSS, HTML/CSS/JS
- **Tools:** Git/GitHub, JSON, Tensorflow, OpenCV
- **Soft Skills:** Analytical thinking, autodidact, problem solving, teamwork, fast learner

Relevant projects

Desktop GUI for 3DOF Robotic Arm Control – React, TailwindCSS, Tauri, FastAPI

- Designed a cross-platform control interface for a robotic arm using React and TailwindCSS, later packaged as a desktop app using Tauri.
- Implemented both joint-space and Cartesian-space control sliders, as well as gripper actuation.
- Added a real-time 3D visualization widget to display the arm's current pose.
- Developed a JSON-based CRUD system to create, update, delete, and replay predefined positions.
- Built a live console panel that renders logs streamed from a FastAPI backend.

Sales & Inventory Mobile App – React Native, Supabase

- Created authentication flow, product inventory screens with reusable cards, and full CRUD for items.
- Implemented order creation and a dynamic totals/subtotals system with configurable markups.
- Developed a “Sales” dashboard displaying daily, weekly, monthly, and custom-range statistics using a calendar library.
- Integrated Supabase for database, auth, and real-time updates.
